## LEED CI 2009 Background

The LEED for Commercial Interiors (LEED-CI) 2009 program provides a set of criteria for certifying tenant and interior projects. Unlike the whole-building approach set forth in the LEED-NC program, LEED-CI places emphasis on green office and retail environments that are healthy and productive spaces for employees and occupants alike. LEED for Commercial Interiors gives the power to make sustainable choices to tenants and designers, who do not always have control over whole building operations. Achieving LEED certification for a commercial interior space distinguishes the tenant as a socially responsible company dedicated to sustainability.

The overall intent of LEED-CI is to assist in the creation of high performance, energy efficient, healthful, durable, affordable, and environmentally sound interior environments that reduce operation and maintenance costs. Similarly, prerequisites and credits under the LEED-CI program are comparable to other LEED programs, focusing on reduced water use, efficient energy and system performance, sustainable and low-volatile organic compound (low-VOC) materials, and enhanced indoor air quality.

The LEED certification system is a point based system comprised of different “green” measures spread over six (6) categories of sustainability:

1. Sustainable Sites (SS)
2. Water Efficiency (WE)
3. Energy & Atmosphere (EA)
4. Materials & Resources (MR)
5. Indoor Environmental Quality (EQ)
6. Innovation in Operations (IO)

A CI space can accrue points by implementing a number of these credits where the higher number of points earned, the higher level of certification is obtained such that:

- **Certified:** 40-49 credits
- **Silver:** 50-59 credits
- **Gold:** 60-79 credits
- **Platinum:** 80-110 credits

While achieving a LEED-CI certified space may in large part be the result of tenant motivated sustainability measures, the selection of the correct base building and the sustainability characteristics of the building itself can greatly aid a project in achieving a LEED-CI certification.

**LEED-CI Certification at 115 Stevens Avenue**

For a space pursuing LEED-CI certification, characteristics of the base building itself can attribute a multitude of points towards certification. 115 Stevens Avenue provides base building characteristics and has implemented sustainable measures that may contribute up to 17 points towards a tenant space pursuing LEED-CI certification. This potentially provides any space beginning the certification process with almost half of the total 40 points required for basic certification. With additional sustainable design and material considerations, as well as additional tracking during construction and adherence to the Construction Rules and Regulations for the building, it should be very feasible for tenants to build-out their space to achieve a LEED certification.

The following is a detailed description of the credits and characteristics at 115 Stevens Avenue that may contribute to a tenant’s pursuit of LEED-CI certification. 115 Stevens Avenue provides a tenant project with 17 potential points, which is broken out as follows under the LEED credit categories:

Sustainable Sites	9 pts
Materials & Resources	3 pts
Indoor Environmental Quality	4 pts
Innovation in Design	1 pt

---

**TOTAL: 17 pts**

## **SUSTAINABLE SITES (SS)**

The selection of a building that addresses sustainability in both its site and development are of fundamental importance in the build-out of a sustainable CI space. This category under the LEED program addresses building landscape, hardscape, and exterior building issues. The following outlines sustainable characteristics as they apply to LEED-CI credits that 115 Stevens Avenue may contribute to a CI build-out within the building:

### **Path 12. Other Quantifiable Environmental Performance – Green Cleaning – 1pt**

115 Stevens Avenue is associated with a cleaning/supply company that offers Green Cleaning. This is a quantifiable action that is beneficial to the environment and would earn 1 LEED point.

### **SSc3.1: Public Transportation Access - 6 pts**

To reduce pollution and land development as a result of automobile use, the LEED-CI program encourages tenants to choose a space that provides access to modes of alternative transportation. 115 Stevens Avenue provides 5 shuttle runs from the building to a local train station in the morning and afternoon. This accessibility to public transportation provides tenants an opportunity to commute in a more sustainable manner and reduce carbon emissions from single-occupancy vehicle use.

### **SSc3.2: Alternative Transportation – Bicycle Storage and Changing Rooms - 2 pts**

To reduce pollution and land development as a result of automobile use, the LEED-CI program encourages tenants to choose a space that provides access to modes of alternative transportation. 115 Stevens Avenue is currently equipped with 2 showers/changing rooms but does not currently have a bike rack available to tenants for secure storage, however the building management has not observed any bicycle commuters and no request or complaints from tenants in regards to bicycle storage have been received. The building has a total of 205 occupants. As the amount of storage spaces required for earning this credit's LEED points is higher than the building currently needs, building management would prefer not to install additional storage space. However, should the building management notice a rise in the number of bicycle commuters, that the racks are filling up or tenants are requesting additional racks to be added, building management will promptly install additional bicycle storage inside the building premises, to be used exclusively by building occupants.

## **MATERIALS & RESOURCES (MR)**

### **MRc1.1: Tenant Space – Long-Term Commitment - 1 pt**

In an effort to conserve resources, reduce waste, and reduce environmental impacts of tenancy as they relate to materials, manufacturing, and transport, the LEED program rewards tenants for signing a long-term lease. By arranging a lease term of a minimum of 10 years, tenants may gain 1 point towards their LEED certification.

**MRC2: Construction Waste Management - 1-2 pts**

Building Management has in place construction rules and regulations that outline a waste diversion plan and waste diversion rates required during construction. By adhering to the construction waste management plan and utilizing the sample tracking documentation provided by the building, the tenant space may achieve 1 or 2 points for diverting 50% or 75%, respectively, of waste from the landfill.

**INDOOR ENVIRONMENTAL QUALITY (IEQ)**

**IEQp2: Environmental Tobacco Smoke (ETS) Control**

The no smoking policy at the building complies with the requirements set forth in the prerequisite of the LEED-CI 2009 program. Smoking is prohibited in the building and 25' from entrances, outdoor air intakes, and operable windows.

**IEQc3.1: Construction Indoor Air Quality Management Plan, 1 pt**

Building Management has in place a construction rules and regulations outlining the required construction indoor air quality plan to be followed for tenant build-outs. The indoor air quality plan provided is aligned with LEED-CI credit requirements and may allow the project to earn 1 point towards certification.

**IEQc4.1: Low-Emitting Materials – Adhesives and Sealants, 1 pt**

Building Management has in place construction rules and regulations outlining the required use of low emitting adhesives and sealants. The construction rules and regulations outline VOC limits for each type of adhesive and sealant, all of which comply with LEED-CI credit requirements.

**IEQc4.2: Low-Emitting Materials – Paints & Coatings, 1 pt**

Building Management has in place construction rules and regulations outlining the required use of low emitting paints and coatings that comply with LEED-CI credit requirements.

**IEQc4.4: Low-Emitting Materials – Composite Wood & Agrifiber Products, 1 pt**

Building Management has in place construction rules and regulations outlining the required use of composite wood and agrifiber products with no added urea-formaldehyde resins. Adherence to this rule may gain the project 1 point under the LEED-CI program.

**INNOVATION IN DESIGN (ID)**

**IDc2: LEED Accredited Professional, 1 pt**

This credit is awarded to projects that have a LEED Accredited Professional as part of the project team. The Reckson team has a number of LEED Accredited Professionals on staff that will allow the project to earn this credit.
