LEED CI 2009 Background

The LEED for Commercial Interiors (LEED-CI) 2009 program provides a set of criteria for certifying tenant and interior projects. Unlike the whole-building approach set forth in the LEED-NC program, LEED-CI places emphasis on green office and retail environments that are healthy and productive spaces for employees and occupants alike. LEED for Commercial Interiors gives the power to make sustainable choices to tenants and designers, who do not always have control over whole building operations. Achieving LEED certification for a commercial interior space distinguishes the tenant as a socially responsible company dedicated to sustainability.

The overall intent of LEED-CI is to assist in the creation of high performance, energy efficient, healthful, durable, affordable, and environmentally sound interior environments that reduce operation and maintenance costs. Similarly, prerequisites and credits under the LEED-CI program are comparable to other LEED programs, focusing on reduced water use, efficient energy and system performance, sustainable and low-volatile organic compound (low-VOC) materials, and enhanced indoor air quality.

The LEED certification system is a point based system comprised of different “green” measures spread over six (6) categories of sustainability:

1. Sustainable Sites (SS)
2. Water Efficiency (WE)
3. Energy & Atmosphere (EA)
4. Materials & Resources (MR)
5. Indoor Environmental Quality (EQ)
6. Innovation in Operations (IO)

A CI space can accrue points by implementing a number of these credits where the higher number of points earned, the higher level of certification is obtained such that:

- **Certified:** 40-49 credits
- **Silver:** 50-59 credits
- **Gold:** 60-79 credits
- **Platinum:** 80-110 credits

While achieving a LEED-CI certified space may in large part be the result of tenant motivated sustainability measures, the selection of the correct base building and the sustainability characteristics of the building itself can greatly aid a project in achieving a LEED-CI certification.

LEED-CI Certification at 680 Washington Blvd

For a space pursuing LEED-CI certification, characteristics of the base building itself can attribute a multitude of points towards certification. 680 Washington Blvd, provides base building characteristics and has implemented sustainable measures that may contribute up to 22 points towards a tenant space pursuing LEED-CI certification. This potentially provides any space beginning the certification process with more than half of the total 40 points required for basic certification. With additional sustainable design and material considerations, as well as additional tracking during construction and adherence to the Construction Rules and Regulations for the building, it should be very feasible for tenants to build-out their space to achieve a LEED certification.

The following is a detailed description of the credits and characteristics at 680 Washington Blvd that may contribute to a tenant’s pursuit of LEED-CI certification. 680 Washington Blvd provides a tenant project with 22 potential points, which is broken out as follows under the LEED credit categories:

Sustainable Sites	14 pts
Water Efficiency	0 pts
Energy & Atmosphere	0 pts
Materials & Resources	3 pts
Indoor Environmental Quality	4 pts
Innovation in Design	1 pts
Regional Priority Credit	0 pts
TOTAL:	22 pts

SUSTAINABLE SITES (SS)

The selection of a building that addresses sustainability in both its site and development are of fundamental importance in the build-out of a sustainable CI space. This category under the LEED program addresses building landscape, hardscape, and exterior building issues. The following outlines sustainable characteristics as they apply to LEED-CI credits that 680 Washington Blvd. may contribute to a CI build-out within the building:

Path 5. Heat Island Effect Non-Roof - 1pt

To help minimize the urban heat island effect, the LEED program encourages buildings to minimize the exposure of dark, non-reflective surfaces such as asphalt parking lots to the sun. Because parking at 680 Washington Blvd. is 100% covered and located within the building, it can contribute one (1) pt towards a tenant's LEED certification.

Path 12. Other Quantifiable Performance (Green Cleaning) – 1 pt

This particular credit can be awarded to a building for any additional quantifiable sustainability initiatives the building has in place that may not be directly addressed under any existing credits. It has been noted that the building currently has in place a green cleaning program, which may qualify as a point under this credit. The current building vendor, Crown Maintenance, has verified that recycled paper products and least toxic chemicals are utilized. Additional information regarding the specifics of the green cleaning program will have to be provided for submittal of this credit.

SSc2: Development Density & Community Connectivity - 6 pts

Image 1: Aerial view of 680 Washington Blvd

The LEED program encourages tenants to choose space in areas with existing infrastructure to protect greenfields and preserve habitat and natural resources. Locating a Commercial Interiors project in an infill site helps control urban sprawl and uses existing infrastructure, including roads, utility services, and other reduction may be achieved by downsizing parking space for building occupants.

680 Washington Blvd is located in the city of Stamford, CT – an established community with pedestrian access to basic community services and within ½ mile from a residential area with 10 units per acre net. A detailed map showing these services has been provided for reference in the appendix.

SSc3.1: Public Transportation Access - 6 pts

To reduce pollution and land development as a result of automobile use, the LEED-CI program encourages tenants to choose a space that provides access to modes of alternative transportation. 680 Washington Blvd is within a ¼ mile (close walking distance) to a number of CT Transit bus lines. This accessibility to public transportation provides tenants an opportunity to commute in a more sustainable manner and reduce carbon emissions from single-occupancy vehicle use.

Image 2: CT Transit bus lines within ¼ mile from 680 Washington Blvd in Stamford

MATERIALS & RESOURCES (MR)

MRc1.1: Tenant Space – Long-Term Commitment - 1 pt

In an effort to conserve resources, reduce waste, and reduce environmental impacts of tenancy as they relate to materials, manufacturing, and transport, the LEED program rewards tenants for signing a long-term lease. By arranging a lease term of a minimum of 10 years, tenants may gain 1 point towards their LEED certification.

MRc2: Construction Waste Management - 1-2 pts

Building Management has in place construction rules and regulations that outline a waste diversion plan and waste diversion rates required during construction. By adhering to the construction waste management plan and utilizing the sample tracking documentation provided by the building, the tenant space may achieve 1 point for a 50% diversion rate or 2 points for a 75% diversion rate.

INDOOR ENVIRONMENTAL QUALITY (IEQ)

IEQp2: Environmental Tobacco Smoke (ETS) Control

The no smoking policy at the building complies with the requirements set forth in the prerequisite of the LEED-CI 2009 program. Smoking is prohibited in the building and 25' from entrances, outdoor air intakes and operable windows.

IEQc3.1: Construction Indoor Air Quality Management Plan, 1 pt

Building Management has in place a construction rules and regulations outlining the required construction indoor air quality plan to be followed for tenant build-outs. The indoor air quality plan provided is aligned with LEED-CI credit requirements and may allow the project to earn 1 point towards certification.

IEQc4.1: Low-Emitting Materials – Adhesives and Sealants, 1 pt

Building Management has in place construction rules and regulations outlining the required use of low emitting adhesives and sealants. The construction rules and regulations outline VOC limits for each type of adhesive and sealant, all of which comply with LEED-CI credit requirements.

IEQc4.2: Low-Emitting Materials – Paints & Coatings, 1 pt

Building Management has in place construction rules and regulations outlining the required use of low emitting paints and coatings that comply with LEED-CI credit requirements.

IEQc4.4: Composite Wood & Agrifiber Products, 1 pt

Building Management has in place construction rules and regulations outlining the required use of composite wood and agrifiber products with no added urea-formaldehyde resins. Adherence to this rule may gain the project 1 point under the LEED-CI program.

INNOVATION IN DESIGN (ID)

IDc2: LEED Accredited Professional, 1 pt

This credit is awarded to projects that have a LEED Accredited Professional as part of the project team. The Reckson team has a number of LEED Accredited Professionals on staff that will allow the project to earn this credit.
