

1350 Sixth Avenue

WiredScore fact sheet

Connectivity isn't a nice to have, it's a requirement

That's why 1350 Sixth Avenue has worked with WiredScore to measure, improve and certify its digital connectivity.

WiredScore is the world's only internationally recognized digital connectivity rating scheme. 1350 Sixth Avenue has been awarded a WiredScore Platinum rating for its outstanding digital connectivity!

WiredScore
PLATINUM

What does this mean?

Connectivity

Five or more high-speed internet providers are available (fiber or fixed wireless) giving tenants options at a competitive rate.

There is reliable mobile performance for at least two operators in the building for tenants to connect or use as a backup internet solution.

Fixed wireless connectivity is ready to deliver over-the-air high-speed internet to tenants. This alternative to fiber can limit risk of outage.

A landlord-owned fiber backbone is ready to enable faster deployment of services and reduce installation time for new tenants.

Fiber connectivity is ready to deliver high-speed internet to tenants.

Infrastructure

The space allocated for service provider equipment is secured and dedicated to improve data security and reduce risks of accidental damage.

There are diverse points of entry on different sides of the building to prevent single points of failure.

Physically diverse risers increase the resiliency of tenant connectivity services.

There is spare capacity at the building points of entry to enable faster installation times and minimum disruption for new internet service providers.

Access Readiness

There is a signed access agreement available with at least one internet service provider to streamline installation and offer full transparency to tenants.

Connectivity options

Fiber/Fixed Wireless	Distribution
AT&T	Partial Distribution
Cogent	Partial Distribution
Crown Castle Fiber	Partial Distribution
Natural Wireless	Partial Distribution
Pilot Fiber	Full Distribution
Verizon	Full Distribution
Windstream Enterprise	Partial Distribution

Get online faster!

As a tenant in a WiredScore certified property you can leverage WiredScore internet concierge services for free to help you get set-up with great internet or voice services. No cost and no obligation to you.

Additional details

Address

1350 6th Avenue, New York
NY, 10019, United States

Building Size

590,000 Sqft

Expiration

February 8, 2024

Classification

WiredScore - V3 - Office - Single Building - Occupied

Certification ID

29395

Technical jargon

Fiber

The most technologically advanced form of cabling used in buildings. Direct fiber provides dedicated high speed connections with equal download and upload speeds.

In-building mobile planning

Radio frequency (RF) testing should be considered for all commercial buildings to confirm the mobile signal strength available throughout the building. Having an in-building mobile solution installed ensures quality of service to existing and new tenants alike.

Fixed wireless

Rooftop based antenna networks are used for both primary and secondary forms of connectivity. A top choice for secondary connections because it doesn't rely on the existing cabling into a building.

Telecommunication room

A location in the building where service provider equipment is installed. Separation of telecommunication equipment from that of other utilities, such as electricity, gas or water, reduces the risk of internet outages by reducing personnel access to equipment servicing tenants.

Points of entry

These are the telecommunication cable entry points into the building. Having multiple POEs from different locations around the building creates physical separation. Therefore, if the connectivity from one POE is disrupted, connectivity from the other POE can still be functional.

Communication risers

A riser is the pathway that runs vertically from the bottom to the top of the building. Access to risers should be via secure closets on each floor. Risers in diverse locations, with capacity for future installations, ensure that providers can deliver reliable and resilient services to all tenants in the building.

Signed access agreements

Signed access agreement documents indicate that an agreement is in place between the landlord and the ISP that owns cables and equipment in the building. The agreements limit the potential for future conflicts or challenges between landlord and provider that may threaten the ability of tenants to maintain their current or future internet connectivity.

Contact the WiredScore Team for any questions on connectivity or the certification.
